Stata tip 36: Which observations? Erratum

Nicholas J. Cox
Department of Geography
Durham University
Durham City, UK
n.j.cox@durham.ac.uk

In the last code example,

```
. summarize gear, meanonly
. levelsof obsno if x == r(max)
   56
. summarize x, meanonly
. levelsof obsno if x == r(min)
   12
```

the last three commands should refer to the variable `gear`, not to `x`.
