The Stata Journal publishes reviewed papers together with shorter notes or comments, regular columns, book reviews, and other material of interest to Stata users. Examples of the types of papers include 1) expository papers that link the use of Stata commands or programs to associated principles, such as those that will serve as tutorials for users first encountering a new field of statistics or a major new technique; 2) papers that go “beyond the Stata manual” in explaining key features or uses of Stata that are of interest to intermediate or advanced users of Stata; 3) papers that discuss new commands or Stata programs of interest either to a wide spectrum of users (e.g., in data management or graphics) or to some large segment of Stata users (e.g., in survey statistics, survival analysis, panel analysis, or limited dependent variable modeling); 4) papers analyzing the statistical properties of new or existing estimators and tests in Stata; 5) papers that could be of interest or usefulness to researchers, especially in fields that are of practical importance but are not often included in texts or other journals, such as the use of Stata in managing datasets, especially large datasets, with advice from hard-won experience; and 6) papers of interest to those teaching, including Stata with topics such as extended examples of techniques and interpretation of results, simulations of statistical concepts, and overviews of subject areas.

For more information on the Stata Journal, including information for authors, see the web page

Subscriptions are available from StataCorp, 4905 Lakeway Drive, College Station, Texas 77845, telephone 979-696-4600 or 800-STATA-PC, fax 979-696-4601, or online at

http://www.stata.com/bookstore/sj.html

Subscription rates:

Subscriptions mailed to US and Canadian addresses:

- 3-year subscription (includes printed and electronic copy) $153
- 2-year subscription (includes printed and electronic copy) $110
- 1-year subscription (includes printed and electronic copy) $ 59
- 1-year student subscription (includes printed and electronic copy) $ 35

Subscriptions mailed to other countries:

- 3-year subscription (includes printed and electronic copy) $225
- 2-year subscription (includes printed and electronic copy) $158
- 1-year subscription (includes printed and electronic copy) $ 83
- 1-year student subscription (includes printed and electronic copy) $ 59
- 3-year subscription (electronic only) $153

Back issues of the Stata Journal may be ordered online at

The Stata Journal is published quarterly by the Stata Press, College Station, Texas, USA.

Address changes should be sent to the Stata Journal, StataCorp, 4905 Lakeway Drive, College Station TX 77845, USA, or email sj@stata.com.
Stata tip 18: Making keys functional

Shannon Driver
StataCorp
s.driver@stata.com

Did you know that you can create custom definitions for your F-keys in Stata?

F-key definitions are created via global macros. On startup, Stata sets the F-key defaults to:

F-key definition

| F1   | help                  |
| F2   | #review;              |
| F3   | describe;            |
| F7   | save                 |
| F8   | use                  |

You can redefine these keys if you wish.

When a definition ends with a semicolon (;), Stata will automatically execute that command as if you typed it and pressed the Enter key; otherwise, the command is immediately entered into the command line as if you had typed it. Stata then waits for you to press the Enter key. This allows you to modify the command before it is executed.

For example, to define the F4 key to execute the list command, you would type:

```
. global F4 "list;"
```

The “F4” here is actually a capital F followed by the number 4.

The best place to create these definitions is in an ASCII text file called profile.do. Every time Stata is launched, it looks for profile.do and, if it finds it, executes all of the commands it contains. For more information, type help profile.

Let’s say that you want to create a definition for F4 to open a window showing the contents of a particular directory. You could do this on Windows by typing:

```
. global F4 '"winexec explorer C:\data;"'
```

On a Macintosh, you could type:

```
. global F4 '"open /Applications/Stata8/Stata;"'
```

You can also create F-key definitions to launch your favorite text editor.

```
. global F5 '"winexec notepad;"
```

Yet another application is programming the ’ and ’ keys, which Stata uses to delimit local macros. Many keyboards do not have the left- or open-quote character of this...
pair, so an alternative is to define an $F$-key to be that key. For symmetry, you might want another $F$-key to be the right- or close-quote character. But how do you define a replacement for a key if you do not have that key in the first place? One answer lies in Stata’s `char()` function:

```
. global F4 = char(96)
. global F5 = char(180)
```

You may want to make a note that $F10$ is reserved internally by Windows, so you cannot program this key. Also, not all Macintosh keyboards have $F$-keys.

For more information on this topic, please see [U] 13.2 F-keys.
