Stata Press Copy Editors

Adam Crawley, David Culwell, and Deirdre Skaggs

The *Stata Journal* publishes reviewed papers together with shorter notes or comments, regular columns, book reviews, and other material of interest to Stata users. Examples of the types of papers include 1) expository papers that link the use of Stata commands or programs to associated principles, such as those that will serve as tutorials for users first encountering a new field of statistics or a major new technique; 2) papers that go "beyond the Stata manual" in explaining key features or uses of Stata that are of interest to intermediate or advanced users of Stata; 3) papers that discuss new commands or Stata programs of interest either to a wide spectrum of users (e.g., in data management or graphics) or to some large segment of Stata users (e.g., in survey statistics, survival analysis, panel analysis, or limited dependent variable modeling); 4) papers analyzing the statistical properties of new or existing estimators and tests in Stata; 5) papers that could be of interest or usefulness to researchers, especially in fields that are of practical importance but are not often included in texts or other journals, such as the use of Stata in managing datasets, especially large datasets, with advice from hard-won experience; and 6) papers of interest to those who teach, including Stata with topics such as extended examples of techniques and interpretation of results, simulations of statistical concepts, and overviews of subject areas.

The *Stata Journal* is indexed and abstracted by *CompuMath Citation Index*, *Current Contents/Social and Behavioral Sciences*, *RePEc: Research Papers in Economics*, *Science Citation Index Expanded* (also known as *SciSearch*), *Scopus*, and *Social Sciences Citation Index*.

Announcement of the Stata Journal Editors' Prize 2018

The editors of the *Stata Journal* are pleased to invite nominations for their 2018 prize in accordance with the following rules. Nominations should be sent as private email to editors@stata-journal.com by July 31, 2018.

1. The *Stata Journal* Editors' Prize is awarded annually to one or more authors of a specified paper or papers published in the *Stata Journal* in the previous three years.

2. The prize will consist of a framed certificate and an honorarium of U.S. $1,000, courtesy of the publisher of the *Stata Journal*. The prize may be awarded in person at a Stata Conference or Stata Users Group meeting of the recipient's or recipients' choice or as otherwise arranged.

3. Nominations for the prize in a given year will be requested in the *Stata Journal* in the first issue of each year and simultaneously through announcements on the *Stata Journal* website and on Statalist. Nominations should be sent to the editors by private email to editors@stata-journal.com by July 31 in that year. The recipient(s) will be announced in the *Stata Journal* in the last issue of each year and simultaneously through announcements on the *Stata Journal* website and on Statalist.

4. Nominations should name the author(s) and one or more papers published in the *Stata Journal* in the previous three years and explain why the work concerned is worthy of the prize. The precise time limits will be the annual volumes of the *Stata Journal*, so that, for example, the prize for 2018 will be for work published in the annual volumes for 2015, 2016, or 2017. The rationale might include originality, depth, elegance, or unifying power of work; usefulness in cracking key problems or allowing important new methodologies to be widely implemented; and clarity or expository excellence of the work. Comments on the excellence of the software will also be appropriate when software was published with the paper(s). Nominations might include evidence of citations or downloads or of impact either within or outside the community of Stata users. These suggestions are indicative rather than exclusive, and any special or unusual merits of the work concerned may naturally be mentioned. Nominations may also mention, when relevant, any body of linked work published in other journals or previously in the *Stata Journal* or *Stata Technical Bulletin*. Work on any or all of statistical analysis, data management, statistical graphics, and Stata or Mata programming may be nominated.

© 2018 StataCorp LLC

5. Nominations will be considered confidential both before and after award of the prize. Neither anonymous nor public nominations will be accepted. Authors may not nominate themselves and so doing will exclude those authors from consideration. The editors of the *Stata Journal* may not be nominated. Employees of StataCorp may not be nominated. Such exclusions apply to any person with such status at any time between January 1 of the year in question and the announcement of the prize. The associate editors of the *Stata Journal* may be nominated.

6. The recipient(s) of the award will be selected by the editors of the *Stata Journal*, who reserve the right to take advice in confidence from appropriate persons, subject to such persons not having been nominated themselves in the same year. The editors' decision is final and not open to discussion.

Previous awards of the Prize were to David Roodman (2012); Erik Thorlund Parner and Per Kragh Andersen (2013); Roger Newson (2014); Richard Williams (2015); Patrick Royston (2016); and Ben Jann (2017). For full details, please see *Stata Journal* 12: 571–574 (2012); *Stata Journal* 13: 669–671 (2013); *Stata Journal* 14: 703–707 (2014); *Stata Journal* 15: 901–904 (2015); *Stata Journal* 16: 815–825 (2016); and *Stata Journal* 17: 781–785 (2017).
